

## case studies

### Bolton at Home Housing Association

This property was suffering from condensation and mould growth, particularly at the wall to ceiling junction as shown.

The area was poorly insulated which created "cold spots" which caused condensation to form and mould to grow.

Suretherm was applied on 2nd December 2015 and was inspected over three months later on 14th March 2016. The results show that mould has not grown back on areas treated with Suretherm.

### New Charter Housing Association

This house was suffering from major condensation and mould issues throughout the whole property. The tenant regularly wiped mould from the surfaces but it kept coming back.

The area was poorly insulated which created "cold spots" which caused condensation to form and mould to grow.

Suretherm was applied on 1st February 2016 and was inspected 10 weeks later on 12th April 2016.

The results overwhelmingly prove that Suretherm really works!
